

Chapter 11 Inheritance and Polymorphism

① Programming Exercise 11.3 p.445 (Subclasses of Account)

In Programming Exercise 9.7, the Account class was defined to model a bank account. An account has the properties account id, balance, annualInterestRate, and dateCreated, and methods to deposit and withdraw funds.

Create two subclasses for checking and saving accounts. A checking account has an overdraft limit, but a savings account cannot be overdrawn.

Draw the UML diagram for the classes and then implement them. Write a test program that creates objects of Account, SavingsAccount, and CheckingAccount and invokes their toString() methods.

```
run:
Checkings
Overdraft Limit: 5000
Balance is 5000.0
Withdraw: 10000
Balance is -5000.0
This account was created at Sun Mar 07 21:48:27 ICT 2021
BUILD SUCCESSFUL (total time: 11 seconds)
```

② Programming Exercise 11.8 p.446 (New Account class)

An Account class was specified in Programming Exercise 9.7. Design a new Account class as follows:

- Add a new data field **name** of the String type to store the name of the customer.
- Add a new **constructor** that constructs an account with the **specified name, id, and balance**.
- Add a new data field named **transactions** whose type is **ArrayList** that stores the transaction for the accounts. Each transaction is an instance of the Transaction class. The Transaction class is defined as shown in Figure 11.6.

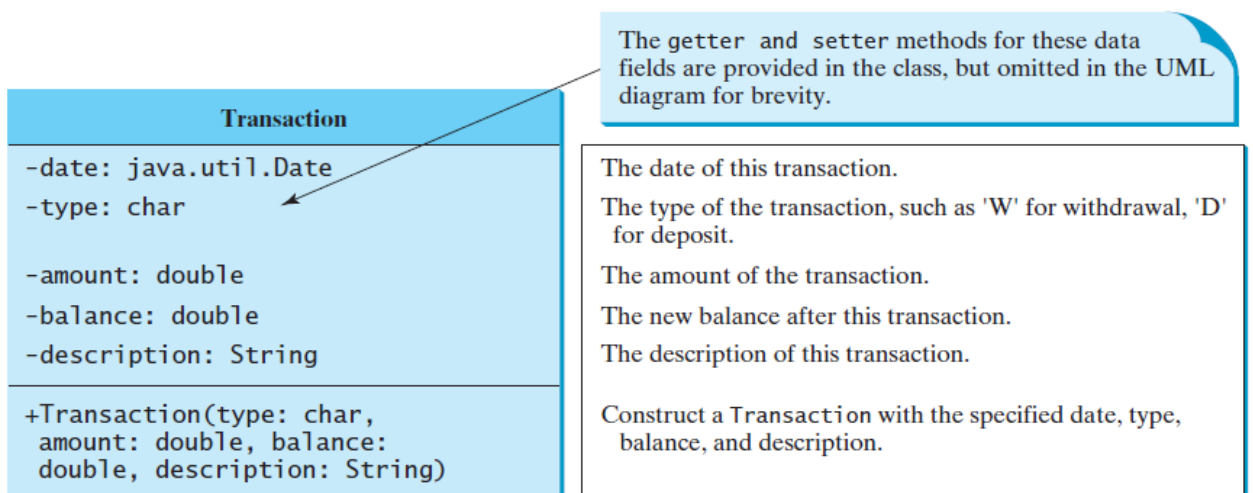

FIGURE 11.6 The **Transaction** class describes a transaction for a bank account.

- Modify the **withdraw** and **deposit** methods to add a transaction to the transactions array list.
- All other properties and methods are the same as in Programming Exercise 9.7.

Write a test program that creates an Account with annual interest rate 1.5%, balance 1000, id 1122, and name George. Deposit \$30, \$40, and \$50 to the account and withdraw \$5, \$4, and \$2 from the account. Print an account summary that shows account holder name, interest rate, balance, and all transactions.

ตัวอย่างผลลัพธ์การทำงานของโปรแกรม

```
run:
Name: George
Account ID: 1122
Annual interest rate: 1.65
Balance: 1109.0
Date                Type                Amount                Balance
Sun Mar 07 20:47:59 ICT 2021          D                   30.0                 1030.0
Sun Mar 07 20:47:59 ICT 2021          D                   40.0                 1070.0
Sun Mar 07 20:47:59 ICT 2021          D                   50.0                 1120.0
Sun Mar 07 20:47:59 ICT 2021          W                    5.0                 1115.0
Sun Mar 07 20:47:59 ICT 2021          W                    4.0                 1111.0
Sun Mar 07 20:47:59 ICT 2021          W                    2.0                 1109.0
BUILD SUCCESSFUL (total time: 0 seconds)
```

③ Programming Exercise 11.2 p.445

(The Person, Student, Employee, Faculty, and Staff classes)

Design a class named Person and its two subclasses named Student and Employee. Make Faculty and Staff subclasses of Employee.

- A person has a name, address, phone number, and email address.
- A student has a class status (freshman, sophomore, junior, or senior). Define the status as a constant.
- An employee has an office, salary, and date hired. Use the MyDate class defined in Programming Exercise 10.14 to create an object for date hired.
- A faculty member has office hours and a rank.
- A staff member has a title.
- Override the toString method in each class to display the class name and the person's name.

Draw the UML diagram for the classes and implement them. Write a test program that creates a Person, Student, Employee, Faculty, and Staff, and invokes their toString() methods.

ตัวอย่างการใช้คลาสเกี่ยวกับปฏิทิน

```
Date d = new Date();
System.out.println(d.getTime());

GregorianCalendar gc = new GregorianCalendar(1998, 2, 1);
System.out.print(gc.get(Calendar.YEAR) + "-"
                + gc.get(Calendar.MONTH) + "-" + gc.get(Calendar.DATE));
System.out.println();

LocalDate ld = LocalDate.of(1988, Month.FEBRUARY, 1);
System.out.println(ld);

LocalDateTime ldt = LocalDateTime.of(1978, Month.MARCH, 1, 14, 58);
System.out.println(ldt);
```
